Dragon Medical One (DMO) for Providers

On April 1, 2019 the current Network edition of Dragon will be replaced by a new version

‘DMO – Dragon Medical One’

Educational PowerPoints will be emailed to all providers/departments and will be available in the

STARS PowerChart e-Learning Library on the Intranet Portal

If preferred, providers can register for classes, through the emailed link, which will also be offered from March 25th through April 17th

If you are not actively using Dragon, you may not have a license for the new version. You must have a license to utilize DMO

Contact the Help Desk to request a license

There are several differences between the current network edition of Dragon and the new Dragon Medical One version. There are a few enhancements as well

1. End-users are able to use Dragon at home/off-site with the PowerMic (Acoustic download needed for Mic from IT Client Support)
2. It works in conjunction with the current PowerChart Touch I-Phone app microphone
3. User does not have to set up an initial profile and can start dictating immediately; the add/train words system may take 60-90 seconds of dictating before recognizing
4. User does not have to choose an 'accent'; system is much more intuitive
5. User does not have to set or create as many preferences; the new design has a much cleaner, sleek appearance with a simpler toolbar and settings
6. Previously, Dragon and PowerChart had to be opened separately. Now they are both accessible with just one icon, providing a synchronized session between the two applications. If you open the Dragon SurgiNet icon, it will automatically launch SurgiNet for you

7. Recommended to open Dragon DMO first and PowerChart will automatically open
8. There are fewer specialty vocabulary sets to choose from but since this version is more intuitive, few medical terminologies are missed regardless of the specialty vocabulary chosen. Recommended to select '**General Medicine**' since all specialties fall under it
9. The DragonBar is smaller and does not span the full screen width. The user can 'left click & hold' to reposition its location on the screen. The smaller size will allow you to keep results/reports open for reference while dictating your notes
10. IT will automatically facilitate the transfer Dragon accounts and commands from one domain to another (Network Edition to Dragon Medical One)
11. If you are currently an active Dragon user & find that you do not have access to DMO, contact the Help Desk to **open a ticket requesting a license** to the new DMO. If you want additional training, you must have a license to attend a session
12. Coming in the future, will be a new I-Phone app called 'DMO PowerMic Mobile' where the voice recognition is excellent

Examples of some differences between Network and DMO

Old ACTIONS	New ACTIONS
Say 'Train Word'	Say 'Add Word'
Make that a Command	Make that an Auto-text
Create an auto-text in <u>PowerChart</u> AND create a separate Command in Dragon	Able to pull over Auto-texts from <u>PowerChart</u> into Dragon
Mic button is defaulted to 'press to talk' while speaking	Phone microphone is always 'On' until icon button on screen is pressed to stop recording
Recommended to use Dictation Box to avoid corruption	Can dictate directly into <u>PowerNote</u>
The 'Check Mark' "v" on Mic was defaulted to 'Accept Defaults' in a command	Now the default has been changed to 'Open Dictation Box'. <u>Enduser</u> must change the Default by going to Options if want to continue it to be 'Accept Defaults'
To move from one underscore variable to another in an auto-text, had to use the F3 key on keyboard while dictating	A new universal verbal command is available. Speak 'next score' to move from one underscore to the next one instead of F3 key
To Sign Note, had to manually click 'Sign' within the Note	New universal verbal command is available. Speak 'Sign Note' and Sign note page will display for manual entry. If note was already Saved, it will sign it automatically
